## TEST REPORT

<b>Application No.:</b>	SZEM1702000894CR
<b>Applicant:</b>	KATHREIN Solutions GmbH
<b>Manufacturer:</b>	KATHREIN Solutions GmbH
<b>Factory:</b>	Sunwave Communications Co., Ltd
<b>Product Name:</b>	Remote Unit
<b>Product Description:</b>	The RU conducts digital-analog conversion and power amplification of the input signals.
<b>Model No.:</b>	REU
<b>Trade Mark:</b>	KATHREIN
<b>FCC ID:</b>	2AK72REU0404
<b>Standards:</b>	FCC Part 2:2016 FCC part 27:2016
<b>Date of Receipt:</b>	2017-01-15
<b>Date of Test:</b>	2017-01-15 to 2017-04-05
<b>Date of Issue:</b>	2017-04-06
<b>Test Result :</b>	<b>Pass*</b>

- \* In the configuration tested, the EUT detailed in this report complied with the standards specified above.  
Please refer to section 3 of this report for further details.

Authorized Signature:

Jack Zhang  
EMC Laboratory Manager

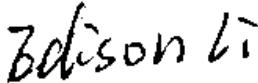

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

### 3 Test Summary

Test Item	FCC part 2	FCC part 27	Result
RF Output Power	2.1046	27.50	PASS
Conducted Spurious Emissions	2.1051	27.53	PASS
Band Edge	2.1051	27.53	PASS
Radiated Spurious Emissions	2.1053	27.53	PASS
Occupied Bandwidth	2.1049	N/A	PASS
Frequency Stability	2.1055	27.54	PASS
Out of Band Rejection	N/A	N/A	PASS

Remark:

EUT: In this whole report EUT means Equipment Under Test.

Tx: In this whole report Tx (or tx) means Transmitter.

Rx: In this whole report Rx (or rx) means Receiver.

No need to implement uplink test as it is cable connect to BTS (No air radiation), then the test about Uplink would be ignored.

Test method standard:

ANSI/TIA-603-D-2010

KDB 935210 D02 Signal Booster Certification v03r02

KDB 935210 D05 Indus Booster Basic Meas v01r01

## 5 General Information

### 5.1 Client Information

Applicant:	KATHREIN Solutions GmbH
Address of Applicant:	Lise-Meitner-Strasse 7, 85737 Ismaning
Manufacturer:	KATHREIN Solutions GmbH
Address of Manufacturer:	Lise-Meitner-Strasse 7, 85737 Ismaning
Factory:	Sunwave Communications Co., Ltd.
Address of Factory:	Sunwave Building 581 Huoju Avenue, Binjiang District, Hangzhou, P.R.China Zip: 310053

### 5.2 General Description of E.U.T.

Product Name:	Remote Unit
Model No.:	REU
Trade Mark:	KATHREIN
Sample Type:	Fixed production
Antenna Gain:	7dBi
Power Supply:	AC120V 60Hz
Optical Fiber:	100cm (unshielded)
DC Cable:	120cm (unshielded)

### 5.3 Details of E.U.T.

Type of Modulation:	LTE,WCDMA
Frequency Band:	Downlink 2110MHz to 2155MHz include the Modulation:LTE,WCDMA
Nominal Output Power	43dBm (downlink)
System Gain	43dB
ALC Function	The system continuously monitors the input power.  Once the detected input power is greater than nominal input power (0dBm for downlink and -50dBm for uplink), the signal will be reduced to nominal input power by automatically adjusting attenuation.

### 5.4 Standards Applicable for Testing

The standard used was FCC part 2 & FCC part 27

## 5.5 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen Branch

No. 1 Workshop, M-10, Middle Section, Science & Technology Park, Shenzhen, Guangdong, China.  
518057.

Tel: +86 755 2601 2053 Fax: +86 755 2671 0594

No tests were sub-contracted.

## 5.6 Other Information Requested by the Customer

None.

## 5.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- **CNAS (No. CNAS L2929)**

CNAS has accredited SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

- **A2LA (Certificate No. 3816.01)**

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 3816.01.

- **VCCI**

The 10m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-823, R-4188, T-1153 and C-2383 respectively.

- **FCC – Registration No.: 556682**

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.: 556682.

- **Industry Canada (IC)**

Two 3m Semi-anechoic chambers and the 10m Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab have been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 4620C-1, 4620C-2, 4620C-3.

## 6 Equipment Used during Test

RE in Chamber						
Item	Test Equipment	Manufacturer	Model No.	Inventory No.	Cal. Date (yyyy-mm-dd)	Cal. Due date (yyyy-mm-dd)

## 7 Test Results

### 7.1 E.U.T. test conditions

Input voltage:	AC 120V	
Test voltage	Normal	AC120V
	Extreme	AC102V~AC138V
Operating Environment:		
Test Temperature:	Normal	22°C ~26°C
	Extreme	-30~50°C
Humidity:	46%~56% RH	
Atmospheric Pressure:	990~1005mbar	
Test Requirement:	The RF output power of the EUT was measured at the antenna port, by adjusting the input power of signal generator to drive the EUT to get to maximum output power point and keep the EUT at maximum gain setting for all tests. The device should be tested on downlink. For detail test Modulation and Frequency, please refer to 7.2.	

#### Remark:

#### FIBER-OPTIC AND OTHER SIMILAR RF DISTRIBUTION SYSTEMS

Fiber-optic distribution systems are a type of in-building radiation system that receives RF signals from an antenna, distributes the signal over fiber-optic cable, and then retransmits at another location for example within a building or tunnel. Most fiber-optic systems are signal boosters; however, some may be repeaters. These systems generally have two enclosures typically called host (or local or donor unit) and remote. Some systems may also have an optional expander box for fan-out to multiple remotes. The system transmits downlink signals from the remote unit to handsets, portables, or clients, and transmits uplink signals via from the host unit. Usually but not always the uplink goes through an intermediate amplifier to a "donor" antenna. Therefore both uplink and downlink must be tested, unless filing effectively documents how connection of uplink to donor antenna with or without an intermediate amplifier will be prevented, such as for always only a cabled connection to a base station. Fiber-optic systems are not amplifiers (AMP equipment class) – they are equipment class TNB or PCB. The same approval procedures also apply for multiple-enclosure systems connected by coax cable.

*Synonyms and related terms: in-building radiation system, coverage enhancer, distributed antenna system, fiber-optic distribution system, converter, donor antenna*

Typical in-building or distributed antenna systems can consist of five different components (enclosures), not counting antennas:

##### 1) host unit

- a) transmits uplink to base station via antenna thru coax, **passive interface unit**, or **active interface unit** (amplifier)
- b) sends base-station downlink via fiber-optic or coax to **remote**
- c) receives handset uplink via fiber-optic or coax from **remote**
- d) optional connection to **expansion unit** via fiber-optic
- e) separate FCC ID from **remote**, unless electrically identical

##### f) **non-transmitting host unit**

- i) connects directly to a base station via coax cable but does not connect to antenna or amplifier

- ii) Part 15 digital device subject to Verification, no FCC ID

##### 2) **remote unit**

- a) receives base-station downlink via fiber-optic or coax from **host**, transmits via antenna to handsets
- b) returns handset uplink via fiber-optic or coax to **host**

c) separate FCC ID from **remote**, unless electrically identical

**3) expansion unit**

- a) fiber-optic or coax from **host**
- b) fiber-optic or coax fan-out to **remote(s)**
- c) Part 15 digital device subject to Verification, no FCC ID

**4) passive interface unit**

- a) contains attenuators, splitters, combiners
- b) coax cable connection between **host** and base-station
- c) passive device, no FCC ID

**5) active interface unit**

- a) amplifies uplink signal from **host unit** for transmit by donor antenna
- b) attenuates downlink from donor antenna
- c) coax cable connection between **host** and **active interface unit**
- d) usually has separate FCC ID; in some cases could be combined/included with **host** as one enclosure

**GENERAL DEFINITIONS FOR CERTIFICATION PURPOSES:**

The following three general definitions follow from those stated in the Part 22 and 24 rule sections as listed above. Two of the definitions replace previous EAB internal definitions given for booster, repeater and extender. The general term “extender” is the same as booster, but booster should be used rather than extender. The general term “translator” is the same as repeater, but repeater should be used rather than translator.

**External radio frequency power amplifier (ERFPA)** - any device which, (1) when used in conjunction with a radio transmitter signal source, is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured. The EAS equipment class AMP is used only for an ERFPA device inserted between a transmitter (TNB/PCB) and an antenna (has only one antenna port). **Booster** is a device that automatically reradiates signals from base transmitters without channel translation, for the purpose of improving the reliability of existing service by increasing the signal strength in dead spots. An “in-building radiation system” is a signal booster. These devices are not intended to extend the size of coverage from the originating base station. A booster can be either single or multiple channels.

**Repeater** is a device that retransmits the signals of other stations. Repeaters are different from boosters in that they can include frequency translation and can extend coverage beyond the design of the original base station. A repeater is typically single channel but can also be multiple channels.

ERFPA (AMP) and boosters/repeaters (TNB/PCB) can generally be authorized for all rule parts except 15 and 18.

Tests should be done with each typical signal. e.g., for F3E emissions use 2500 Hz with 2.5 or 5 kHz deviation. Use of CW signal for some tests is acceptable in lieu of actual emission, in some cases when CW signal gives worst case.

The GX system working principle: the RF signal coupled from BTS is transferred into optical signal, and then transmitted via a fiber to remote unit. the remote re-transfers the optical signal back to RF signal, through the frequency translation and after power amplifiers, can extend the BTS coverage to another desired area, the GX system is compliant with the description about repeater in FCC rules, So **the Equipment belongs to the repeater and TNB class.**

## 7.2 Test Procedure & Measurement Data

Test Bandwidth and Frequency

Downlink: 2110MHz to 2155MHz

LTE Bandwidth	Lowest frequency(MHz)	Middle frequency(MHz)	Highest frequency(MHz)
5MHz	2112.5	2132.5	2152.5
20MHz	2120	2132.5	2145

**Remark:**

- 1) We test the downlink in the band and test the respective frequency as above table;

Modulation	Lowest frequency(MHz)	Middle frequency(MHz)	Highest frequency(MHz)
WCDMA	2112.4	2132.5	2152.6

### 7.2.1 RF Output Power

Test Requirement:

FCC part 27.50(b)(4)& FCC part 27.50 (c)(3)

Test Method:

KDB 935210 D05 Indus Booster Basic Meas v01r01

EUT Operation:

Status:

Drive the EUT to maximum output power.

Conditions:

Normal conditions

Application:

Cellular Band RF output ports

Test Configuration:

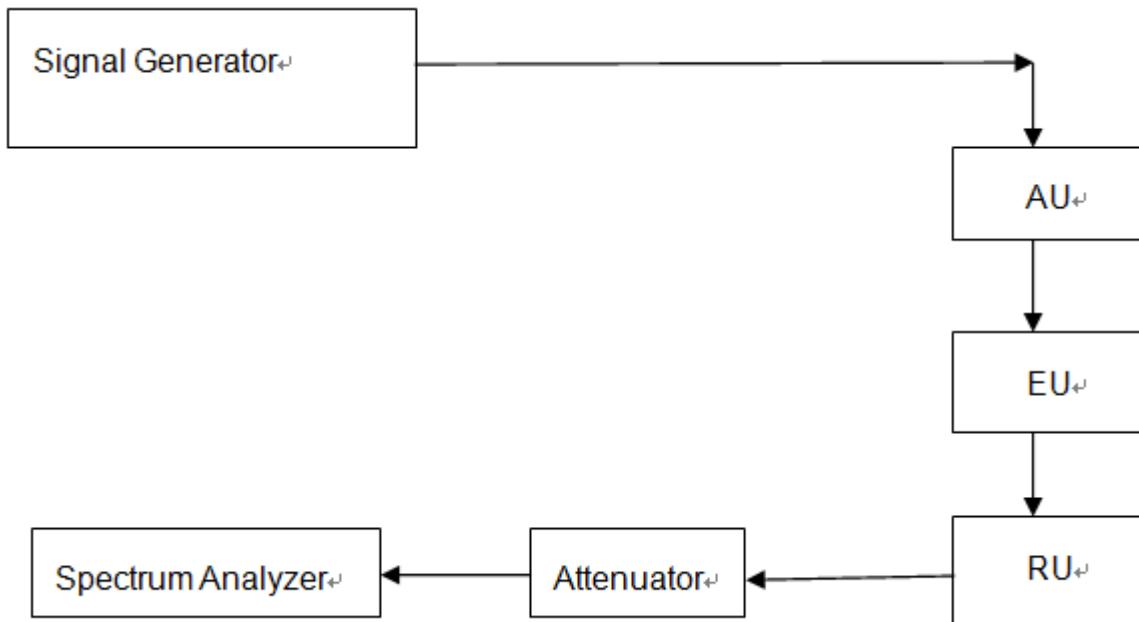

Fig.1 RF Output Power test configuration

Test Procedure:

RF output power test procedure:

For part 27:

- a) Connect the equipment as illustrated, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility.
- b) Set the signal power level of the Signal Generator to 0dBm, and the modulation of the signal is 64QAM
- c) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line.
- d1) Adjust the spectrum analyzer for the following settings:
  - 1) Resolution Bandwidth >>1% the carrier bandwidth,
  - 2) Video Bandwidth refer to standard requirement.
- d2) Use spectrum analyzer channel power measurement function;
- e ) Record the frequencies and levels of carrier power;
- f ) Calculate the signal link way loss and final power value.

Remark:

The system continuously monitors the input power.

Once the detected input power is greater than nominal input power (0dBm for downlink and -50dBm for uplink), the signal will be reduced to nominal input power by automatically adjusting attenuation.

### 7.2.1.1 Measurement Record:

RF Conducted Power:

Downlink: 2110MHz to 2155MHz

LTE Bandwidth	Lowest frequency (dBm)	Middle frequency (dBm)	Highest frequency (dBm)
5MHz	42.98	42.97	42.59
20MHz	43.02	42.68	42.45

Modulation	Lowest frequency(dBm)	Middle frequency(dBm)	Highest frequency(dBm)
WCDMA	42.67	42.65	42.37

## 7.2.2 Conducted Spurious Emissions

Test Requirement:

FCC part 27.53(h)

Test Method:

KDB 935210 D05 Indus Booster Basic Meas v01r01

EUT Operation:

Status: Drive the EUT to maximum output power.

Conditions: Normal conditions

Application: Cellular Band RF output ports

Test Configuration:

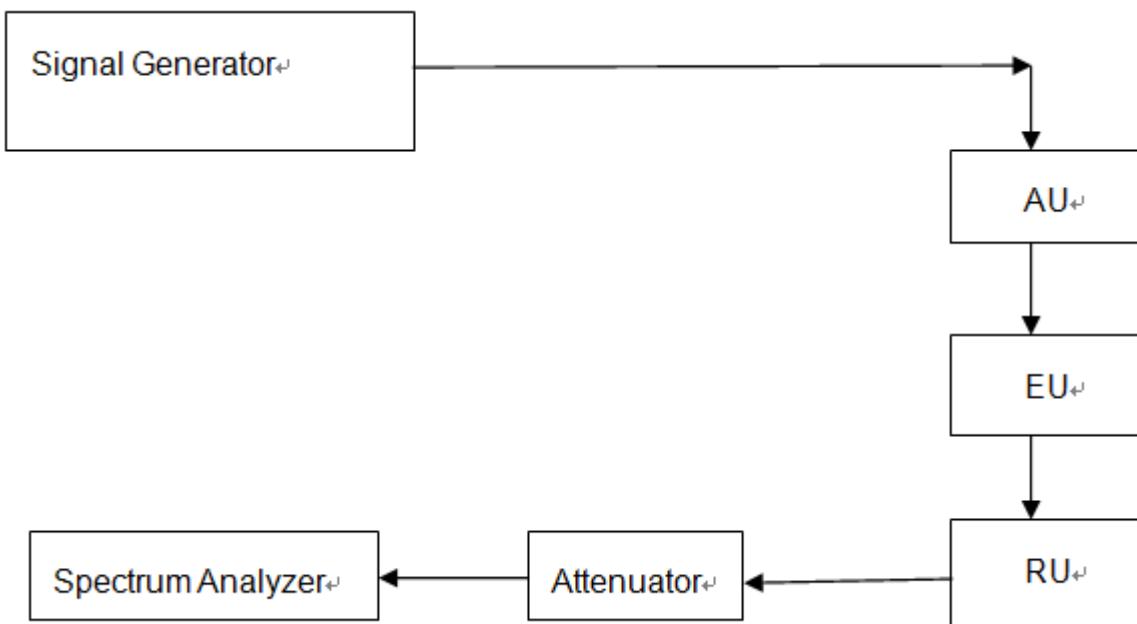

Fig.2. Conducted Spurious Emissions test configuration

## Test Procedure:

Conducted Emissions test procedure:

- a) Connect the equipment as illustrated, with the notch filter by-passed, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility.
- b) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line.
- c) add one 64QAM modulation signal to the EUT, and the level of the signal is 0dBm.
- d) Adjust the spectrum analyzer for the following settings:
  - 1) Resolution Bandwidth,( base the standard, apply the different set),her is 100KHz for frequency band less than 1GHz, 1MHz for frequency over 1GHz;
  - 2) Video Bandwidth refer to standard requirement.
- e) Adjust the center frequency of the spectrum analyzer for incremental coverage of the range from:
  - 1) the lowest radio frequency generated in the equipment, it can be 9KHz base the test method, here select 30MHz as lowest frequency start point;
  - 2) the highest radion frequency shall higher than 10 times of carrier frequency;
- f ) Record the frequencies and levels of spurious emissions from step e)

## Remark:

The notch filter is used for avoid the EUT fundamental carrier output power making the spectrum overload and the harmonic spurious brought by it.

When the EUT fundamental carrier is not enough to make the status, the notch filter could be not used.

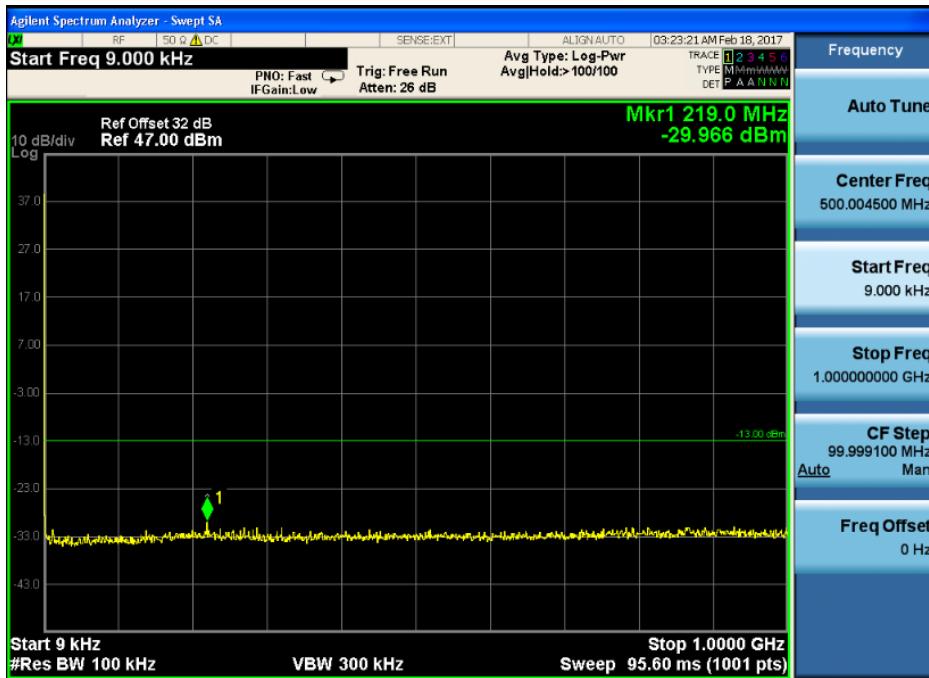

Pretest the EUT on mode with 5M LTE signal input and 20M LTE signal input, found the 5M LTE signal input are worse and report it.

### 7.2.2.1 Measurement Record:

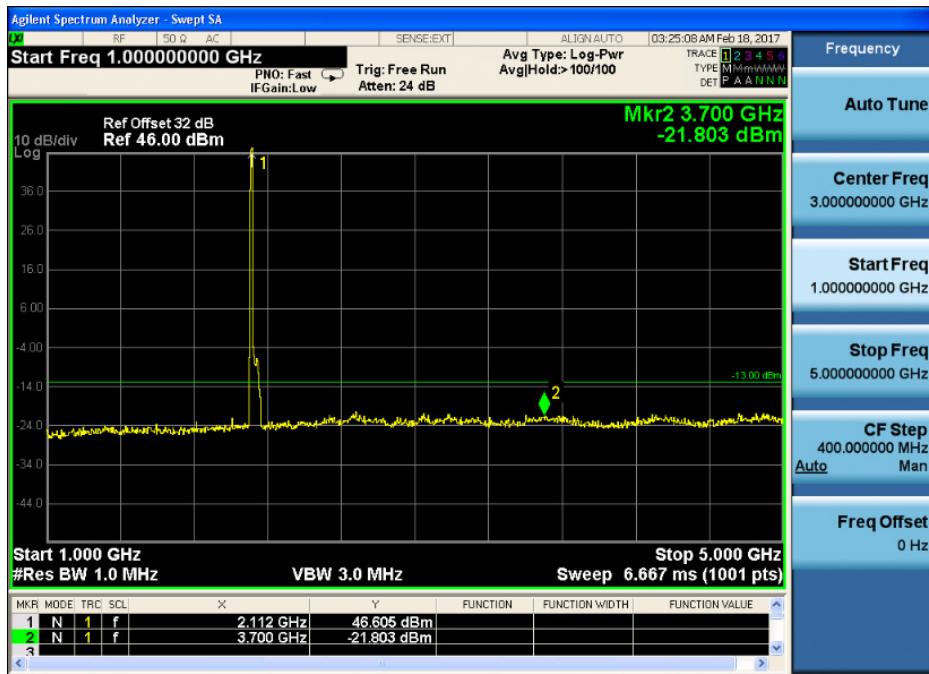

1. Downlink: 2110MHz ~ 2155MHz(LTE)

1.1 lowest frequency:

9KHz to 1GHz

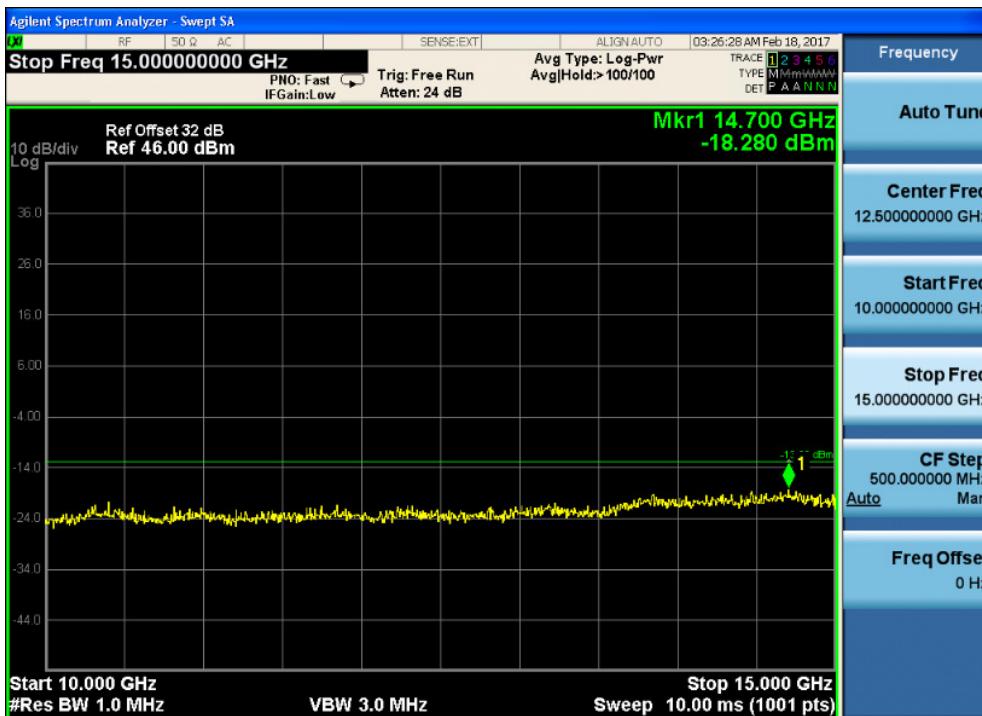

1GHz to 5GHz

5GHz to 10GHz

10GHz to 15GHz

15GHz to 20GHz

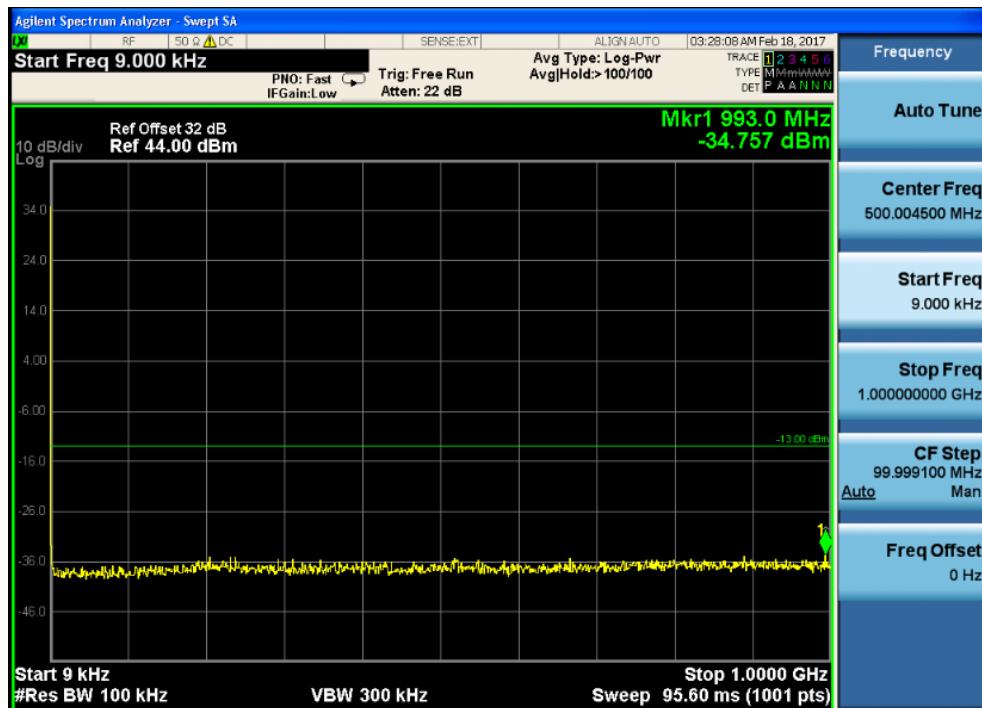

20GHz to 26.5GHz

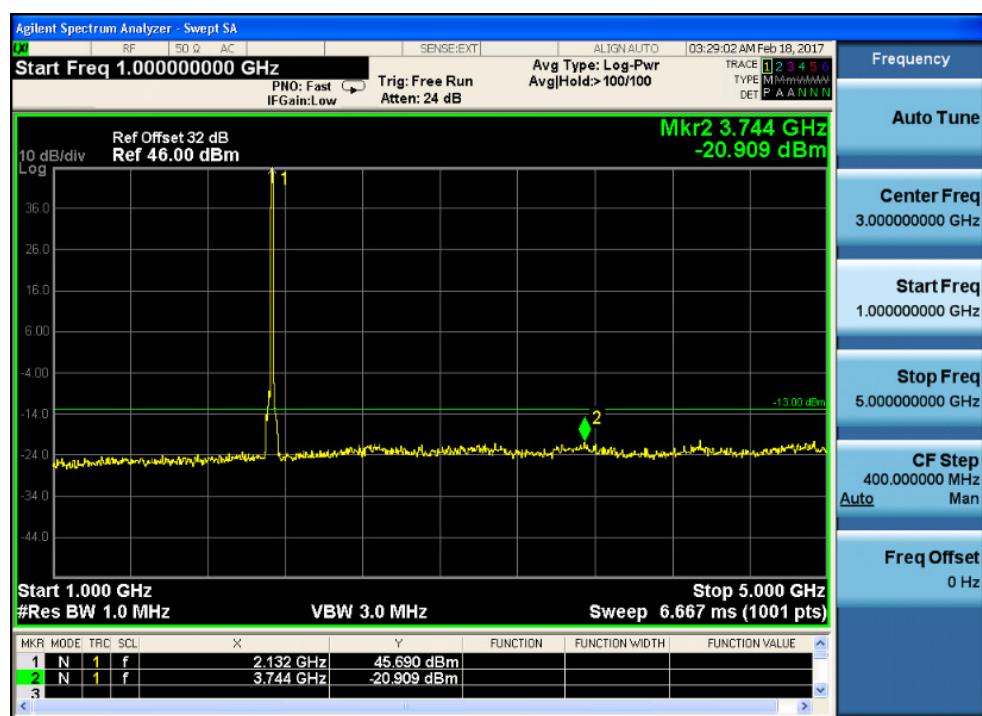

## 1.2 Middle frequency

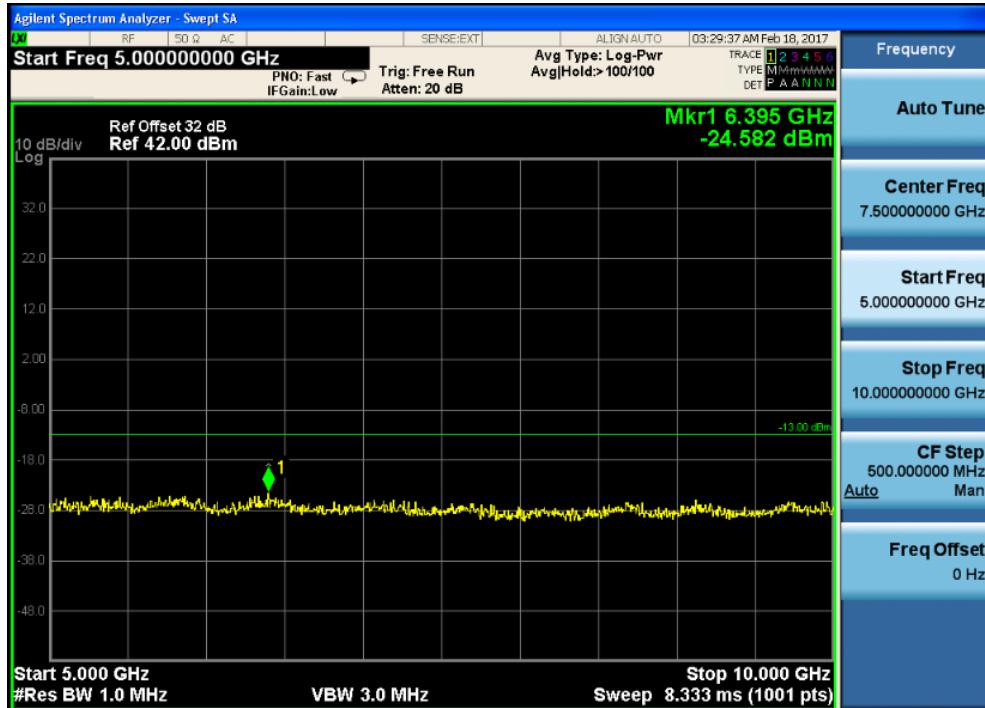

9KHz to 1GHz

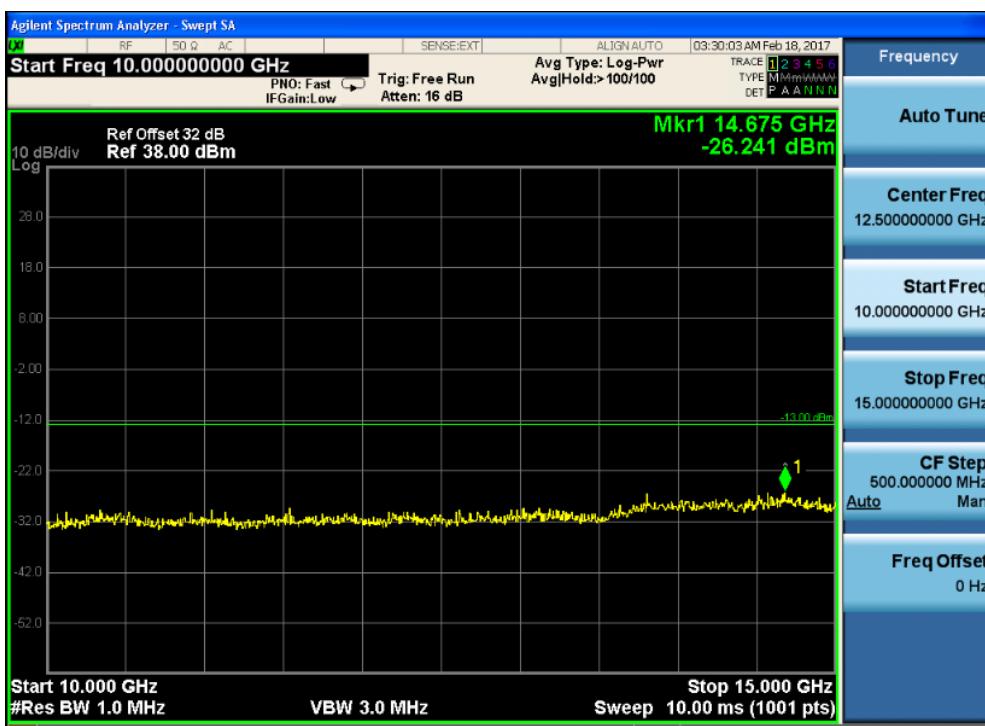

1GHz to 5GHz

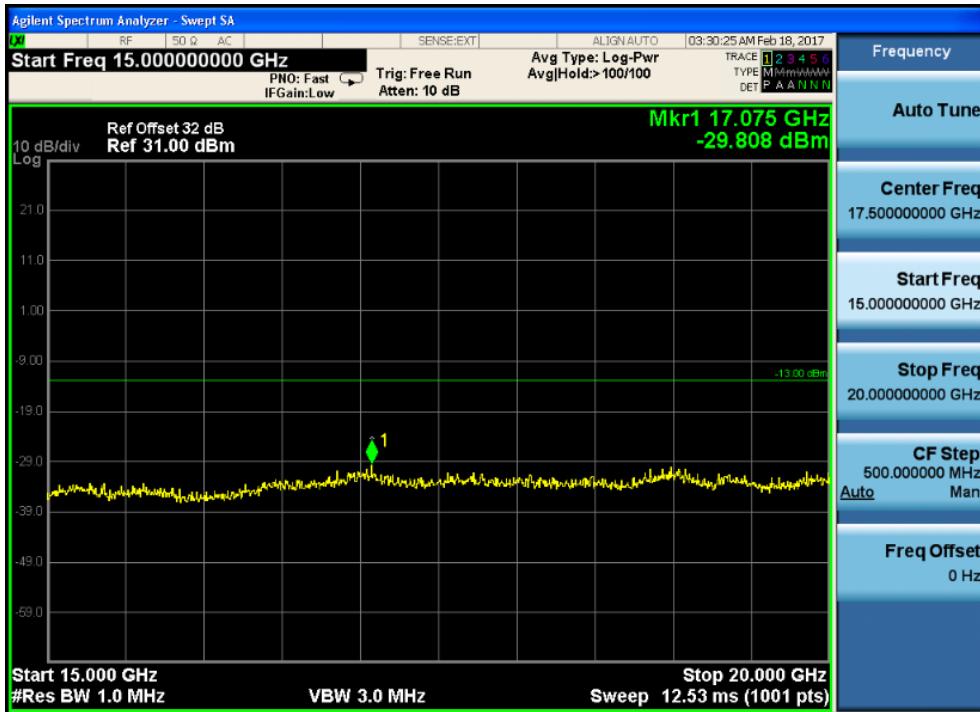

5GHz to 10GHz

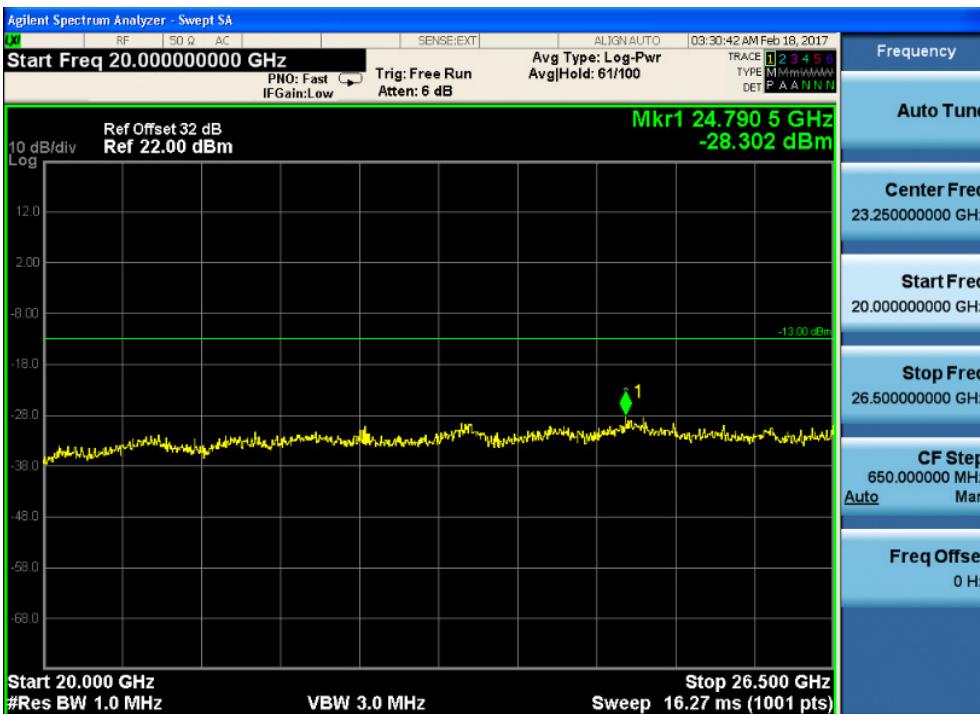

10GHz to 15GHz

15GHz to 20GHz

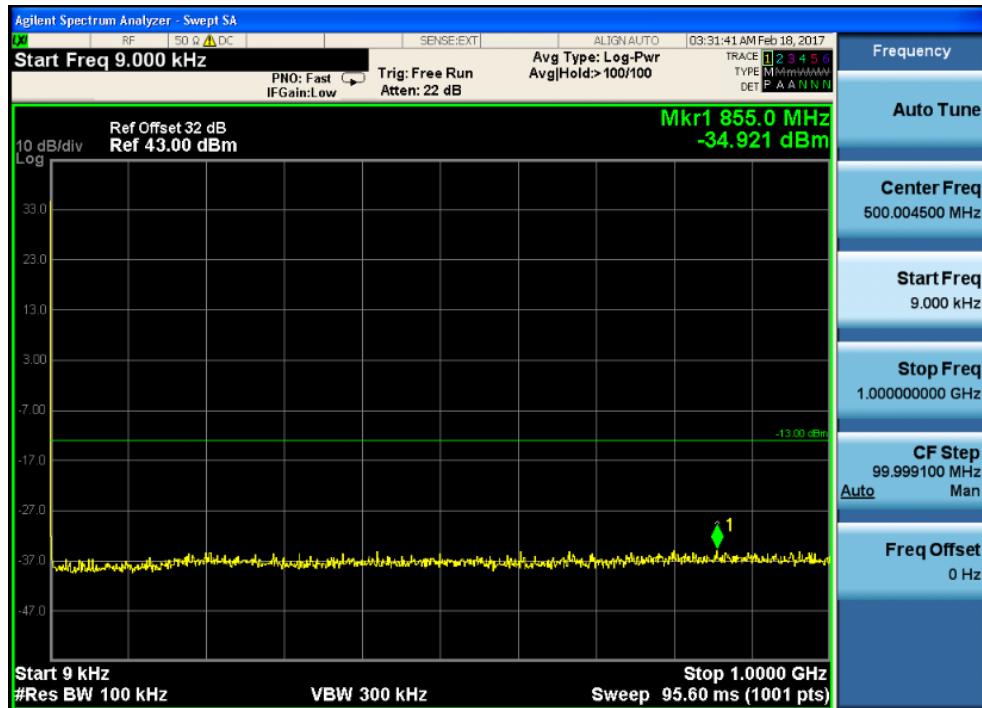

20GHz to 26.5GHz

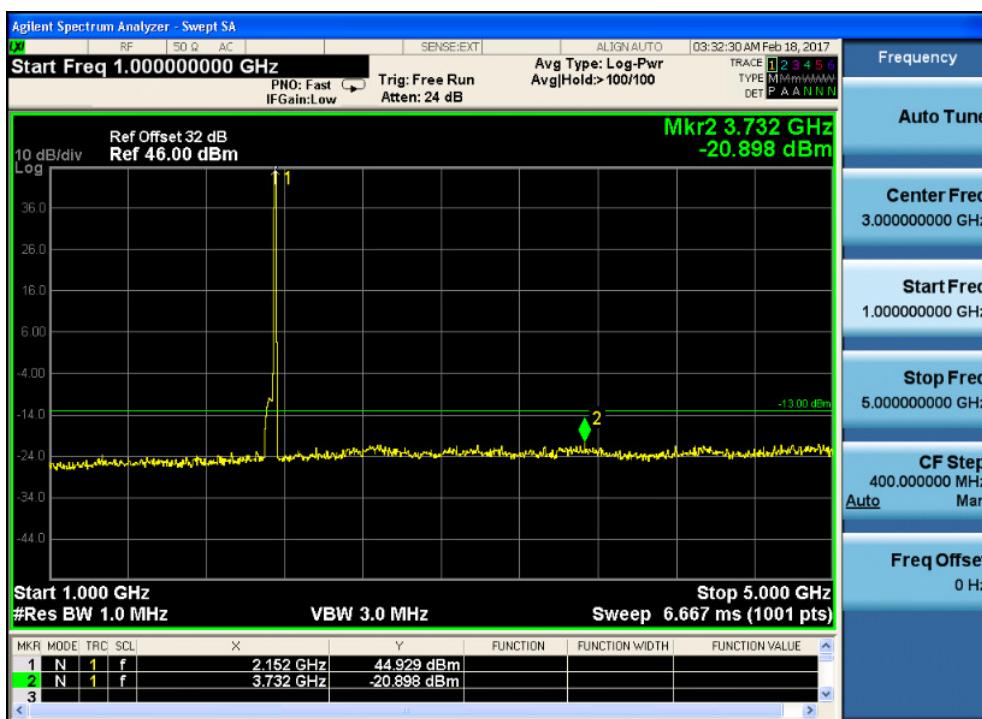

### 1.3 highest frequency

9KHz to 1GHz

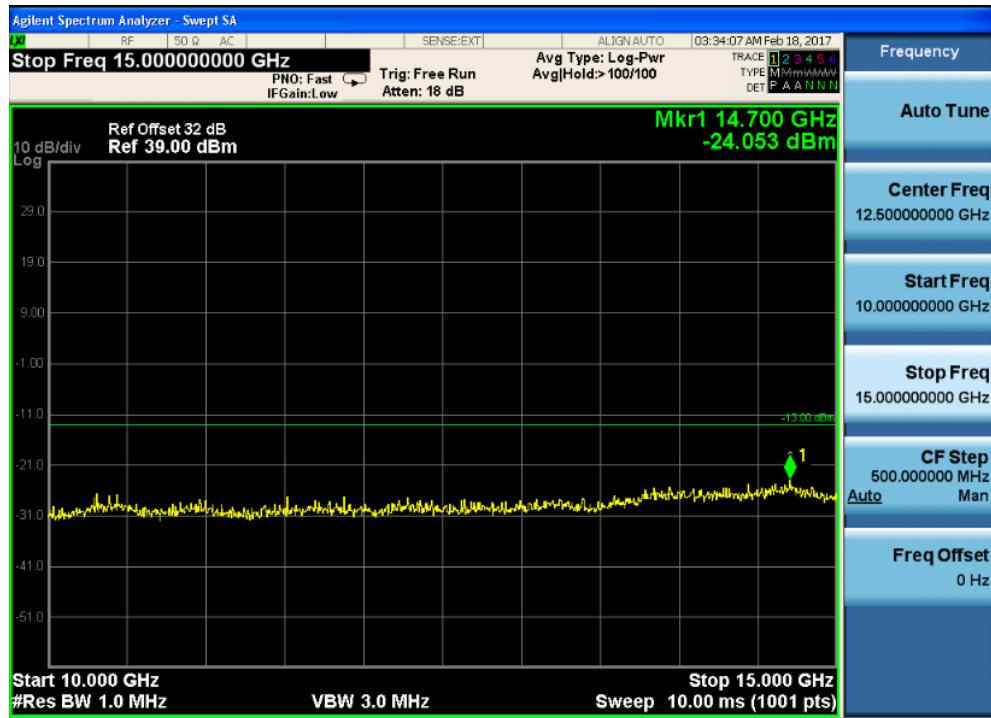

1GHz to 5GHz

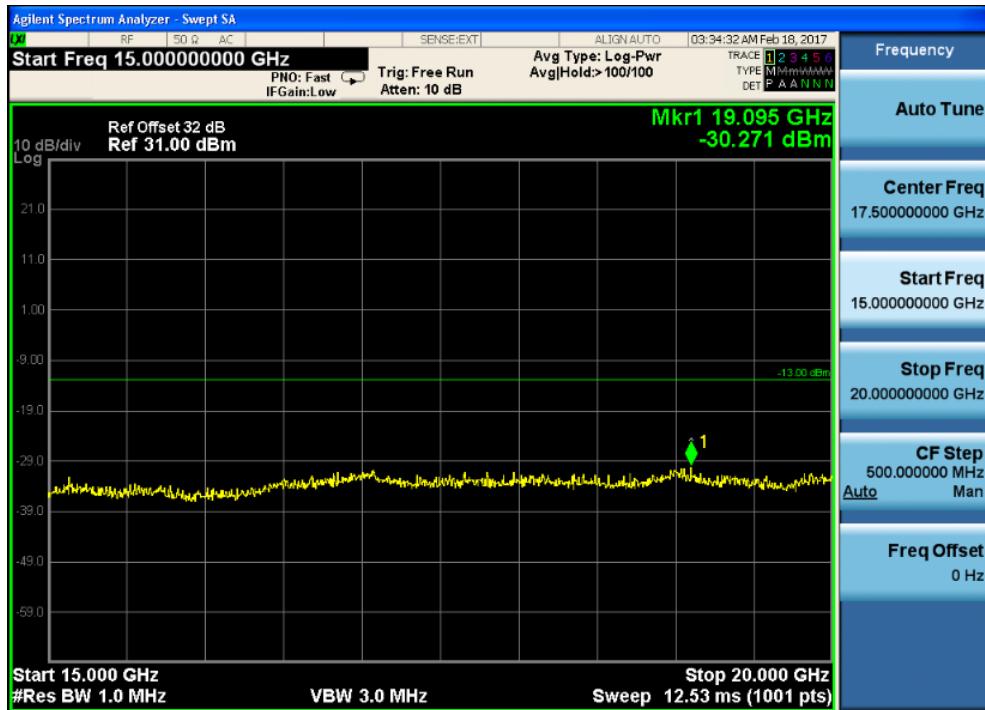

5GHz to 10GHz

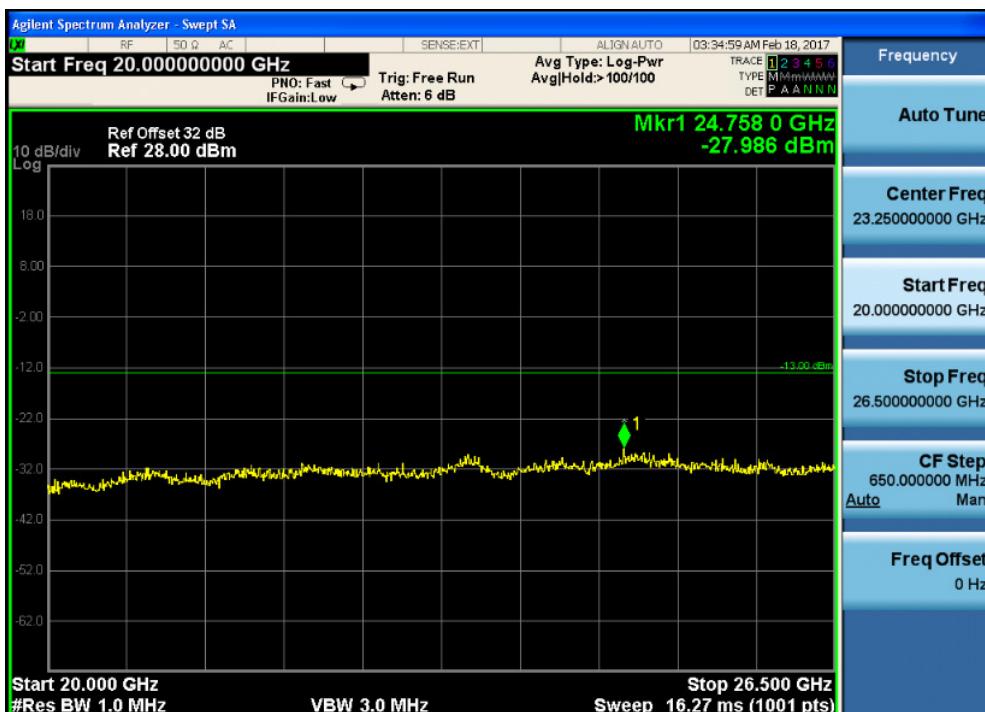

10GHz to 15GHz

15GHz to 20GHz

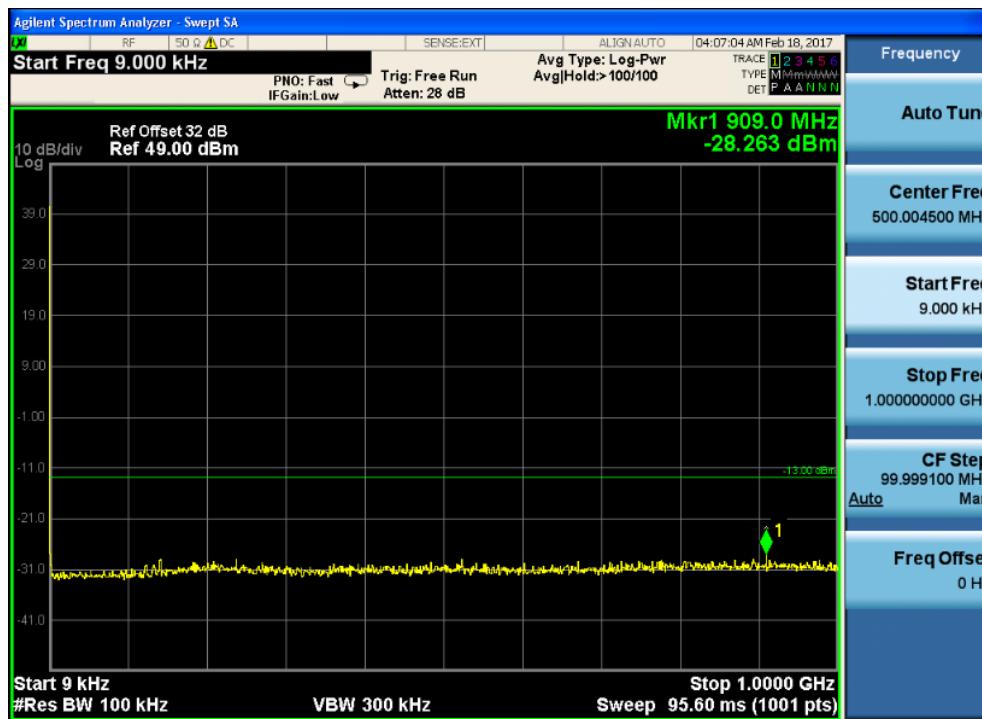

20GHz to 26.5GHz

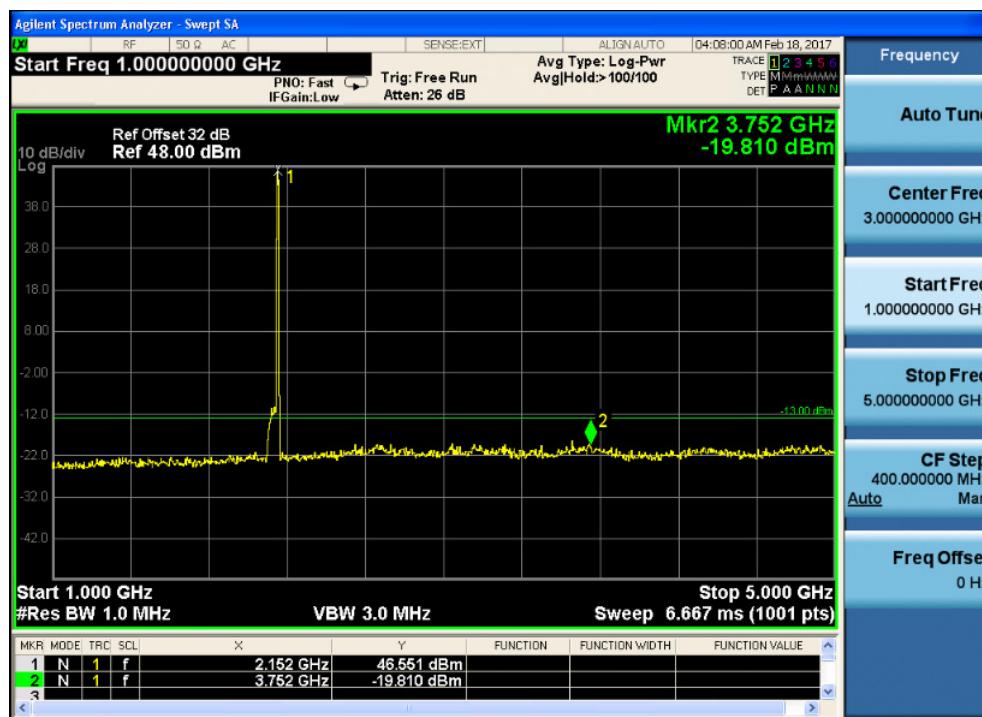

## 2.Downlink: 2110MHz ~ 2155MHz (WCDMA)

### 2.1 lowest frequency:

9KHz to 1GHz

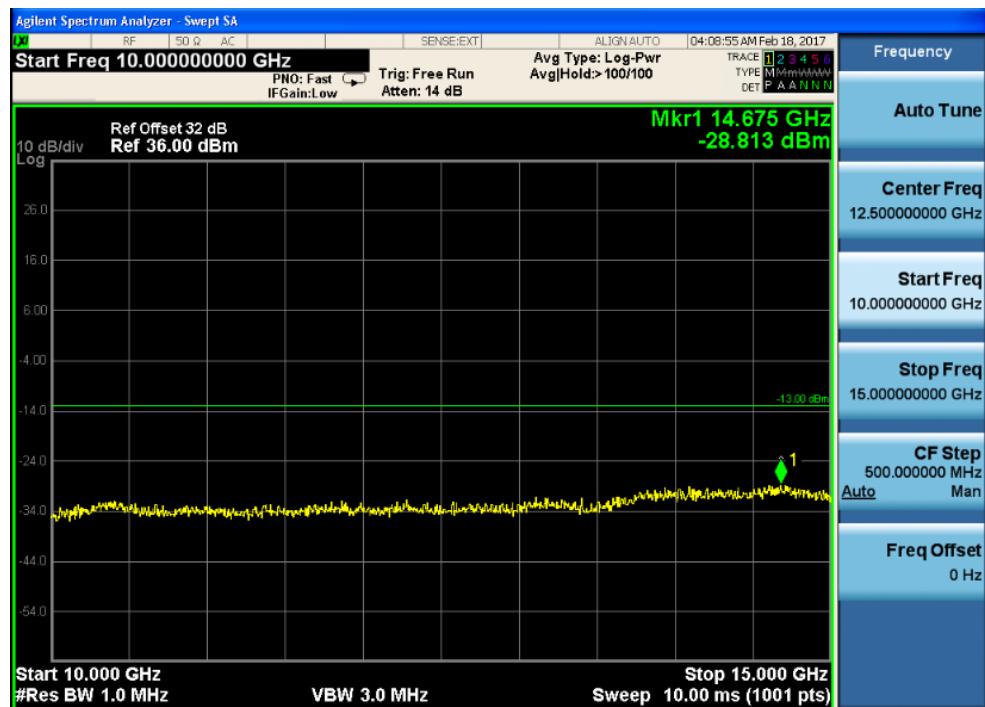

1GHz to 5GHz

5GHz to 10GHz

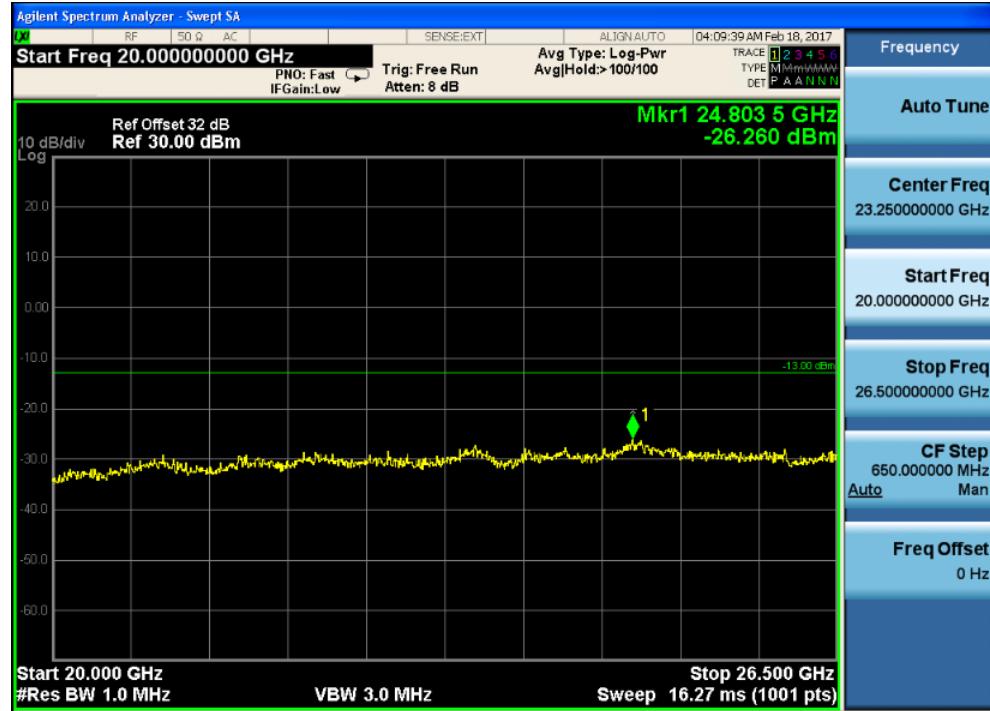

10GHz to 15GHz

15GHz to 20GHz

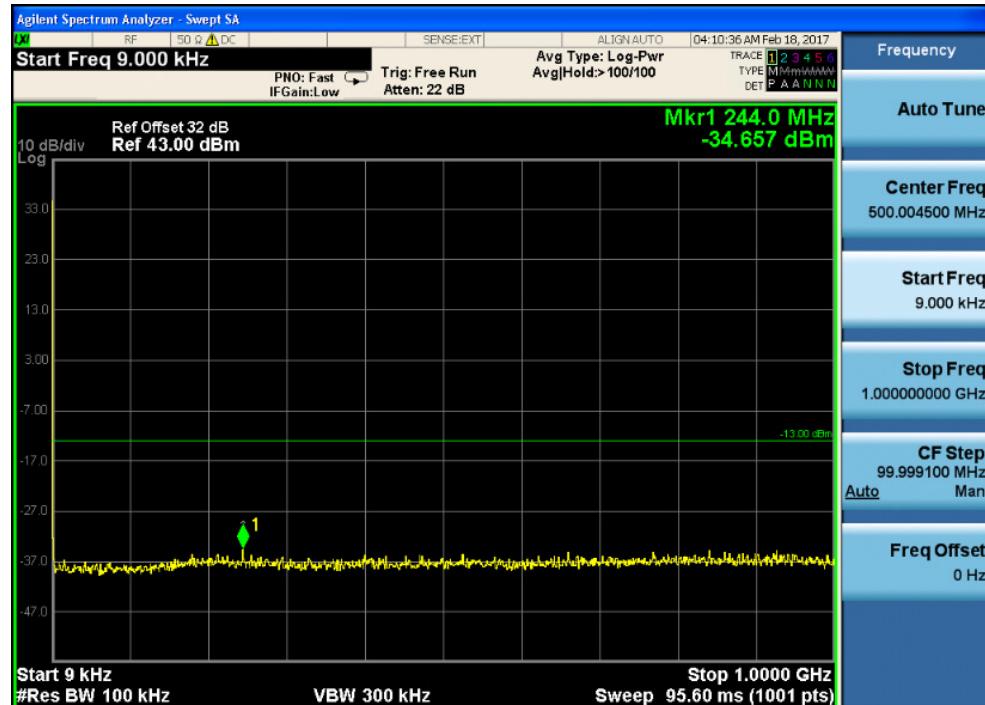

20GHz to 26.5GHz

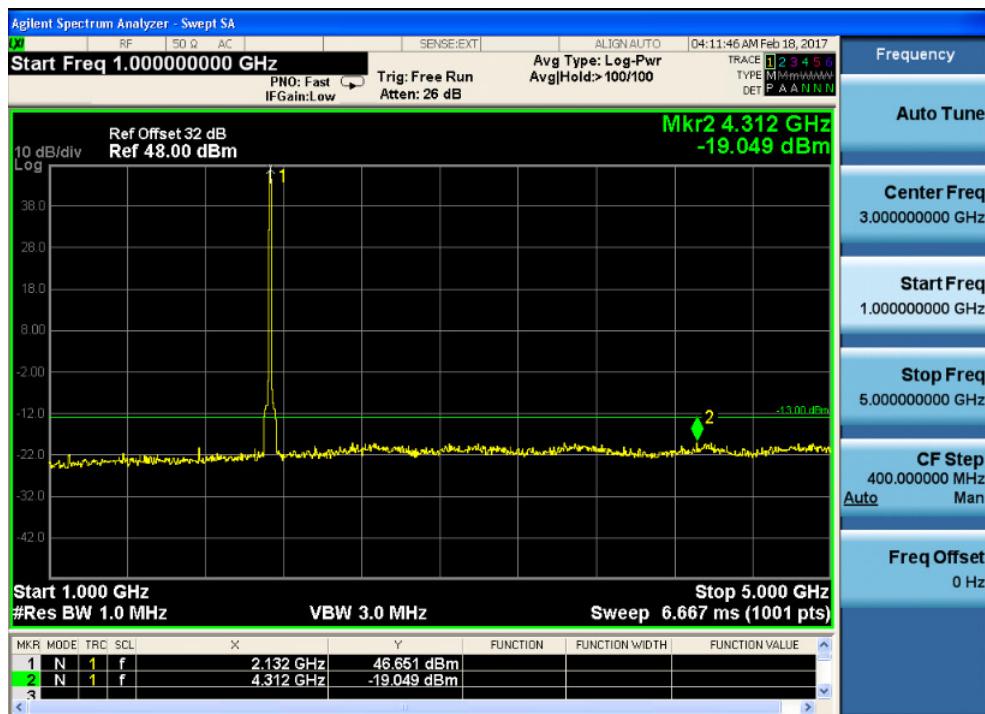

## 2.2 Middle frequency

9KHz to 1GHz

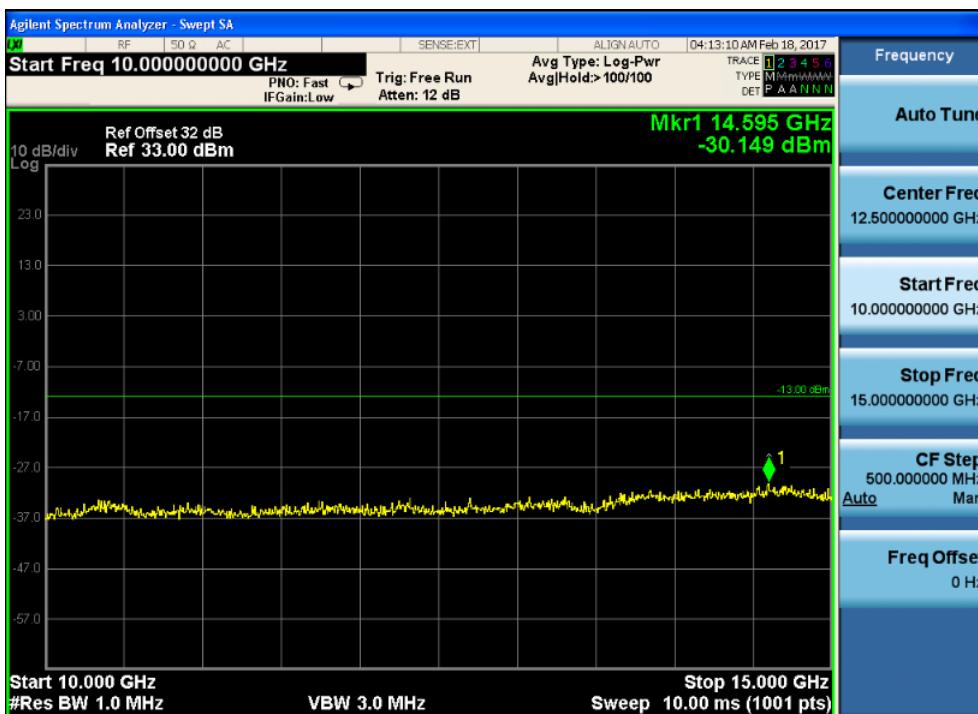

1GHz to 5GHz

5GHz to 10GHz

10GHz to 15GHz

15GHz to 20GHz

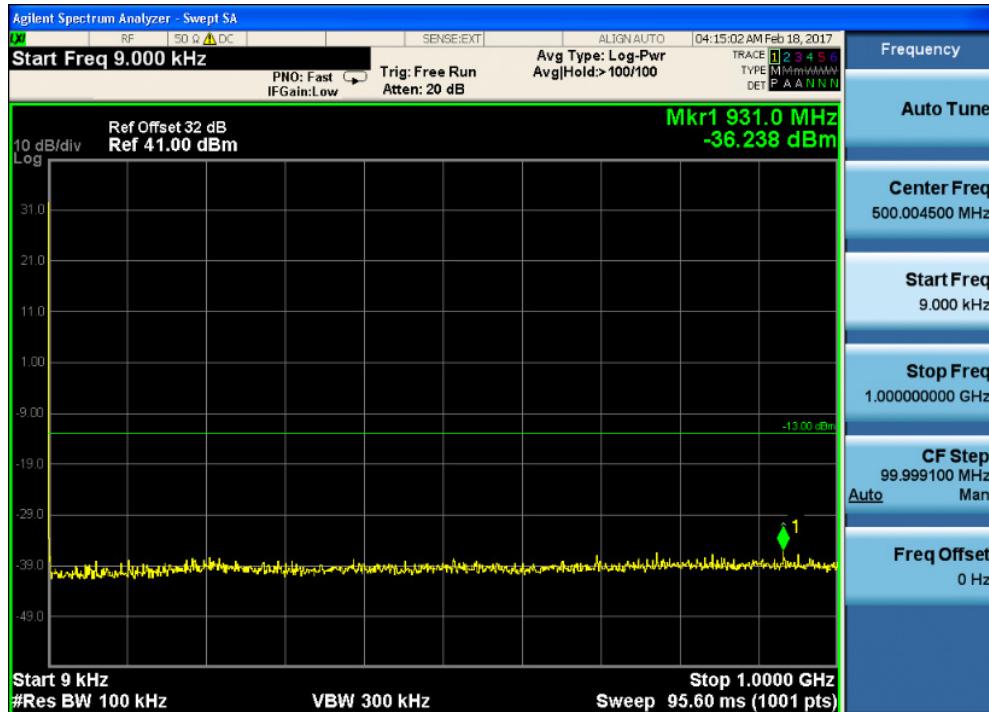

20GHz to 26.5GHz

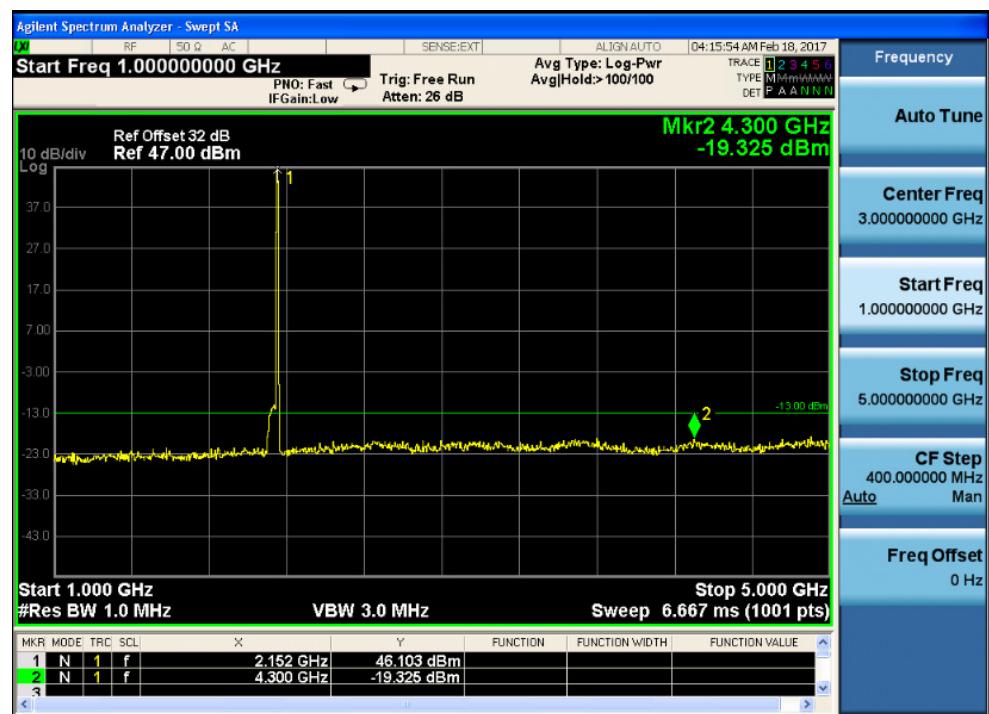

### 2.3 highest frequency

9KHz to 1GHz

1GHz to 5GHz

5GHz to 10GHz

10GHz to 15GHz

15GHz to 20GHz

20GHz to 26.5GHz

### 7.2.3 Band Edge

Test Requirement:

FCC part 27.53(h)

Test Method:

KDB 935210 D05 Indus Booster Basic Meas v01r01

EUT Operation:

Status: Drive the EUT to maximum output power.

Conditions: Normal conditions

Application: Cellular Band RF output ports

Test Configuration:

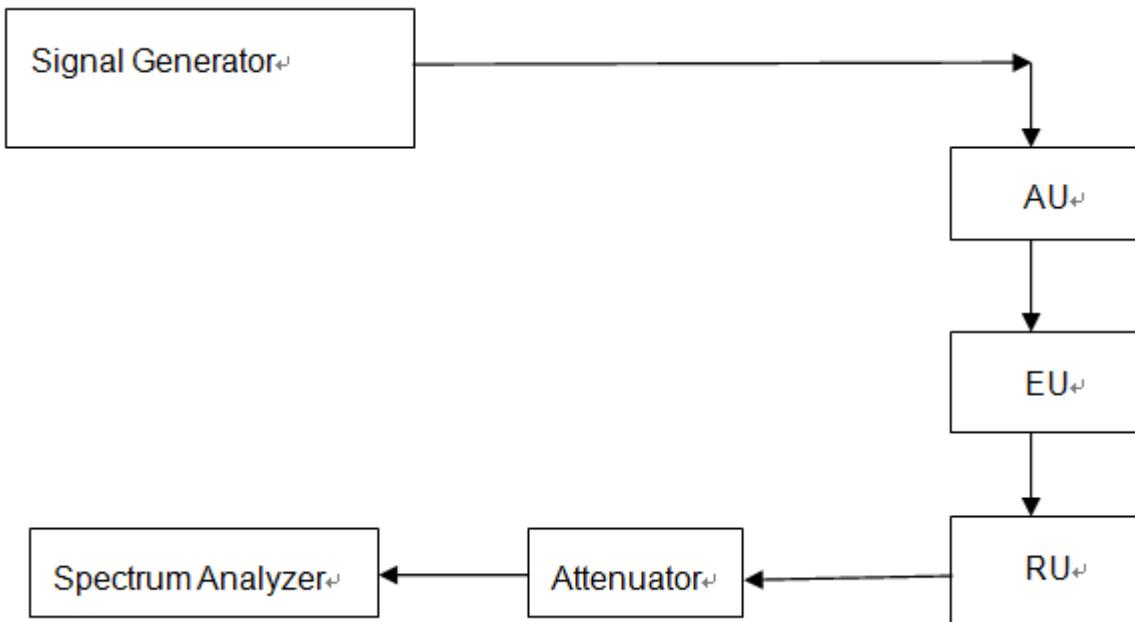

Fig.3. Band edge and Intermodulation test configuration

Test Procedure:

Conducted Emissions test procedure:

- a) Connect the equipment as illustrated, with the notch filter by-passed, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility.
- b) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line.
- c) Add one 64QAM modulation signal and the level of the signal is 0dBm to the signal generator.
- d) Adjust the spectrum analyzer for the following settings:
  - 1) Resolution Bandwidth,( base the standard, apply the different set),here is 100KHz for frequency band less than 1GHz, 1MHz for frequency over 1GHz;
  - 2) Video Bandwidth refer to standard requirement.
- e) Adjust the center frequency of the spectrum analyzer for incremental coverage of the range from:
  - 1) the lowest radio frequency generated in the equipment, it can be 9KHz
